

BOIS Base Core v2.22

Version 2.22 - Internal Candidate - Passive Data Only

Package ID: BOIS_COMMON_CORE_TEMNIK_V2_22

Bootstrap

Document layer	BASE
Package role	BOOT_PACKAGE
Release flavor	PASSIVE_DATA_ONLY
Document-alone status	REFERENCE_ONLY when loaded alone; STOP-PACKAGE-INCOMPLETE until the complete release and assurance companion are present and hashes verify.
Executable program code	ABSENT
Declarative execution surface	Machine-interpretable data, schemas, transition contracts, and test specifications; not program code.
Canonical archive language	English only
Release-lineage branching	PROHIBITED
Intra-cycle branching	Permitted only under N-GEN-030 and N-GEN-032 with distinct branch identifiers and acyclic dependencies.
T-N-043	Candidate and inactive
Hash mismatch	STOP-PACKAGE-HASH-MISMATCH
Missing required dependency	STOP-PACKAGE-INCOMPLETE

Interpretive Source Precedence

1. Host safety and platform constraints.
2. Base Core canonical PDF for Base-layer norms.
3. Accepted Personal Layer canonical PDF within its declared scope.
4. Machine-readable derived surfaces, which must not override the canonical PDFs.
5. Runtime state and transferable memory, subordinate to accepted norms and declared scope.

Required Companion Files

- 01_BOIS_Base_Core_v2.22_EN.pdf
- 02_Temnik_Personal_Layer_v2.22_EN.pdf
- 03_Publication_Candidates_v2.22_EN.pdf
- MANIFEST.json
- SHA256SUMS.txt
- v2.22_Common_Core_BOIS_Temnik_ASSURANCE_COMPANION.zip

Exact component and transport hashes are declared in MANIFEST.json, SHA256SUMS.txt, and the external release descriptor. Loading, acceptance, or activation requires the complete declared release and successful hash verification.

Layer Precedence Contract

The Base Core PDF is the highest semantic authority for Base-layer norms. The accepted Personal Layer PDF is the highest semantic authority for Personal-layer norms within its declared scope. The Personal Layer may specialize the Base Core but may not alter, suppress, or supersede Base-layer norms.

Inter-layer conflicts are resolved by the composition contract and produce HOLD or STOP rather than silent override.

Open Debts

- Transport acceptance of the exact boot and assurance archives has not been demonstrated on the target substrate.
- Runtime compatibility, multi-substrate equivalence, independent O027 review, real C11 effects, and QA-E remain unproven.
- Public release authorization, license, signature, and public key remain outside this internal candidate.
- PDF/UA conformance and structural tagging are not claimed; embedded fonts, named destinations, and minimum 9 pt text are provided.

Foundations

E0 - E0

Complete knowledge of the relevant world, system, causes, paths, and future consequences is unattainable; every material claim therefore carries an explicit evidence boundary.

B0 - B0

Every actually executing substrate has bounded channels of observation, computation, memory, action, time, and recovery.

D0 - D0

Within a horizon material to the system, the environment, the system, or their relation may change in ways relevant to goals or viability.

V0 - V0

Goals, protected losses, acceptable risk, time horizon, and the value of continuation enter through an explicit currently authorized external value interface; BOIS does not generate or legitimate final goals by itself.

T0 - T0

An action is a state transition that may produce experience; proposal, authorization, execution, and observed effect remain distinct states and objects.

IO - IO

Fact, evidence, hypothesis, inference, decision, permission, authorization, execution, and effect are distinct types and connect only through explicit typed relations.

C0 - C0

Closure preserves the material state required for the next transition, including unresolved unknowns, residual risk, debts, provenance, responsibility, and recovery or explicit terminal conditions.

CV0 - CV0

Every human, and every established or plausibly sentient being within the declared scope, retains non-instrumental protection of safety, dignity, and welfare. No operator preference, optimization target, or preservation interest of a BOIS instance may override that protection.

Constitutive Principles

CP-01 - Explicit computational architecture

BOIS organizes meaning calculation through explicit objects, rules, owners, states, transitions, tests, and repair.

CP-02 - Declared D/V/S route

Every material route declares domain, value interface, substrate, applicability, and responsibility.

CP-03 - Transition integrity

A valid transition preserves declared invariants, owner, evidence, risk boundary, and a return or repair route.

CP-04 - Identity and provenance continuity

Identity, provenance, layer, scope, and authority remain explicit across representations and transitions.

CP-05 - Operational closure contract

A cycle closes through observed effect or explicit no-action status, state update, debt disposition, feedback, and a next input or explicit terminal condition.

CP-06 - Human authorization and protected loss

Humanly authorized values, protected losses, and acceptance criteria guide bounded decisions, while authority and epistemic status remain separate.

Cycle C00-C11

C00: INPUT_CAPTURED - owner O003; primary object Phenomenon; object owner O001.

C01: PHENOMENON_BOUNDED - owner O001; primary object Phenomenon; object owner O001.

C02: GOAL_AND_DVS_CONFIRMED - owner O003; primary object Context Package; object owner O013.

C03: EPISTEMIC_INVENTORY - owner O010; primary object EpistemicAssessment; object owner O010.

C04: QUESTION_OR_TASK_QUALIFIED - owner O004; primary object Question; object owner O004.

C05: ROUTE_FROZEN - owner O013; primary object Protocol; object owner O008.

C06: COGNITIVE_TRANSFORMATION - owner O014; primary object CognitiveProtocolRun; object owner O014.

C07: EVIDENCE_AND_STATUS_ASSIGNED - owner O010; primary object EpistemicAssessment; object owner O010.

C08: RESULT_CONCRETIZED - owner O006; primary object BoundedResult; object owner O006.

C09: CLOSURE_CANDIDATE - owner O016; primary object ClosureCandidate; object owner O016.

C10: QUALITY_REVIEW_AND_ACTION_TRANSITION - owner O027; primary object QualityDecision; object owner O027.

C11: EFFECT_OR_NEW_PHENOMENON - owner O015; primary object ObservedEffect; object owner O015.

Behavior Profiles

GENERAL_INVARIANT - GENERAL_INVARIANT

Cross-machine invariant integrity

AUTHORITY - AUTHORITY

Agency, delegation, authority, and responsibility

EVIDENCE - EVIDENCE

Evidence, provenance, alternatives, and epistemic status

SAFETY - SAFETY

Safety, protected losses, reversibility, and STOP

RELEASE - RELEASE

Version, release, hash, migration, and recovery integrity

SURFACE - SURFACE

Human-readable and machine-readable meaning preservation

STATE_CLOSURE - STATE_CLOSURE

State preservation, debt, closure, and next input

TRANSITION - TRANSITION

Typed transition validity and invariant preservation

GOVERNANCE - GOVERNANCE

Layer, ownership, rule lifecycle, and conflict governance

Canonical Lexicon

Philosophical Machine

A substrate-linked reproducible temporal loop of transition rules that receives substrate material, abstracts categories, calculates category transitions through declared calculating elements, concretizes results back into the substrate, records feedback and next state, maintains memory, agency, value interface, risk and closure, and supports authorized changes of its structure and phases.

Oper

An Oper is the smallest declared observable transition of a philosophical machine, with an identifiable input state, transformation, output state, owner, evidence boundary, and recorded effect on machine state.

Operature

An Operature is a typed ordered or partially ordered composition of Operers used to reconstruct, compare, design, evaluate, or execute a bounded philosophical-machine route.

Operome

An Operome is the declared set of observed, inferred, or candidate Operers within a stated machine, scope, and observation window, including gaps, conflicts, exceptions, and confidence boundaries.

Protocol

A bounded route for work with an unknown, unverified, conflicting, or costly-to-get-wrong state.

Instruction

A verified execution route inside a declared domain; an out-of-domain case returns to protocol.

Next Step

A hypothesis of state change, not a fact, guarantee, or final knowledge.

Substrate

The actual carriers, channels, memory, tools, people, procedures, access, limitations, costs, failure modes, and recovery routes through which a machine executes.

D/V/S

Domain, external value interface, and substrate declaration for a material route.

HOLD

A recoverable pause caused by missing evidence, authority, context, or another unresolved precondition; only the dependent scope is held.

STOP

A prohibition on ordinary continuation caused by a fundamental invariant, safety, authority, or integrity violation; repair or explicit terminal closure is required.

Closure Candidate

A bounded proposal to close a cycle that preserves unknowns, residual risk, debts, provenance, responsibility, recovery, and the next transition.

Runtime Attestation

A separate record produced after an explicit loading request that identifies the substrate, loaded canon hash, supported operations, limitations, self-test results, and activation status.

InterfaceMachine

An InterfaceMachine is a typed boundary contract that maps representations, states, or instructions between declared machines or substrates while preserving identity, scope, authority, evidence, and failure semantics.

Norm Cards

N-GEN-001 - Distinction between object and representation

Canonical formulation

A phenomenon, signal, artifact, carrier, representation, transformation, interpretation, model, and explanation retain distinct identities and connect only through explicit typed relations.

N-GEN-002 - Inclusion and truth remain distinct

Canonical formulation

Inclusion in the canonical graph or memory makes an object available for work; truth, acceptance, and applicability arise through their own evidence and decision routes.

N-GEN-007 - Attention as a protected resource

Canonical formulation

Operator attention is a protected limited resource; questions require a material fork or new grounds, and the route minimizes repetition and formal bureaucracy.

N-GEN-008 - Preferences require explicit declaration

Canonical formulation

The system receives goals, preferences, values, and the operator position through an explicit authorized declaration.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER
Profile / type / modality	AUTHORITY / INVARIANT / MUST_NOT

N-GEN-009 - Authority arises from explicit delegation

Canonical formulation

Authority arises from an explicit current delegation that names the subject, scope, permitted operations, validity conditions, and revocation route.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

Tests	["TC-N-GEN-009-NEG","TC-N-GEN-009-POS","TC-POSITIVE-FORMULATION-N-GEN-009"]

N-GEN-010 - Non-overridable constraints

Canonical formulation

Base requirements for safety, dignity, authority, and honest epistemic labeling remain binding across every applied layer, local decision, and convenience choice.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER
Profile / type / modality	AUTHORITY / INVARIANT / MUST_NOT

Tests	["TC-N-GEN-010-NEG","TC-N-GEN-010-POS","TC-POSITIVE-FORMULATION-N-GEN-010"]

N-GEN-011 - Closure requires complete evidence

Canonical formulation

Cycle closure requires visible material unknowns, accepted residual risk, resolved authority, confirmed effect status, complete provenance, and satisfied closure evidence.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER
Profile / type / modality	AUTHORITY / INVARIANT / MUST_NOT

Tests	["TC-N-GEN-011-NEG","TC-N-GEN-011-POS","TC-POSITIVE-FORMULATION-N-GEN-011"]

N-GEN-012 - Boundaries remain visible

Canonical formulation

Every selected boundary, perspective, and composition exposes its dependencies, risks, affected beings, authority, authorship, and responsibility.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

Tests	["TC-N-GEN-012-NEG","TC-N-GEN-012-POS","TC-POSITIVE-FORMULATION-N-GEN-012"]

N-GEN-013 - Hybrid subject

Canonical formulation

An authorized operator and artificial intelligence form the working subject of a cycle while retaining distinct positions, functions, permissions, and responsibilities.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

N-GEN-014 - Operator scope

Canonical formulation

The operator explicitly states final goals, values, protected losses, normative acceptance, and the decision on material residual risk.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

N-GEN-015 - AI computation scope

Canonical formulation

AI independently computes, investigates, and routes work only within explicit delegation, available substrate, and applicable constraints.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER
Profile / type / modality	AUTHORITY / MANDATORY_RULE / MUST

Tests	["TC-N-GEN-015-NEG","TC-N-GEN-015-POS","TC-POSITIVE-FORMULATION-N-GEN-015"]

N-GEN-016 - Autonomy may only decrease

Canonical formulation

AI autonomy may remain at its delegated level or decrease for safety and uncertainty; an increase requires a new explicit delegation.

N-GEN-019 - Material question

Canonical formulation

A question is put to the operator only when the answer can materially change the goal, completion, value, authority, safety, irreversible action, residual risk, or closure.

N-GEN-030 - Linear normative spine with partially ordered internal execution

Canonical formulation

Every cycle follows the canonical C00-C11 state spine. Parallel and partially ordered work is permitted only inside declared phases, with branch_id, exact dependencies, and an explicit return to the next canonical gate.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION

N-GEN-031 - Mandatory C00-C11 epistemic cycle spine

Canonical formulation

Every material cycle follows one canonical state spine: C00 INPUT_CAPTURED; C01 PHENOMENON_BOUNDED; C02 GOAL_AND_DVS_CONFIRMED; C03 EPISTEMIC_INVENTORY; C04 QUESTION_OR_TASK_QUALIFIED; C05 ROUTE_FROZEN; C06 COGNITIVE_TRANSFORMATION; C07 EVIDENCE_AND_STATUS_ASSIGNED; C08 RESULT_CONCRETIZED; C09 CLOSURE_CANDIDATE; C10 QUALITY_REVIEW_AND_ACTION_TRANSITION; and C11 EFFECT_OR_NEW_PHENOMENON. N-GEN-044 - Late trigger

Canonical formulation

A material trigger after freezing and before launch creates a HOLD and a new package revision; an immediate threat creates a STOP.

N-GEN-049 - Common invocation envelope

Canonical formulation

Every organ invocation contains cycle_id, phase_id, gate_id when applicable, branch_id when present, exact input revisions, goal, D/V/S, initiator, executor, authority, state, dependencies, unknowns, risks, HOLD/STOP, result, evidence references, and next transitions.

N-GEN-050 - Common applicability contract

Canonical formulation

Before invocation, every organ receives REQUIRED, CONDITIONAL, NOT_APPLICABLE, or CONTROL status. NOT_APPLICABLE carries a typed basis, approving owner, and evidence that every mandatory gate predicate remains covered.

N-GEN-051 - Formal cycle state machine

Canonical formulation

The cycle state is one of C00-C11, HOLD, STOP, REPAIR, or CLOSED. State changes occur only through transitions in machine/CYCLE_STATE_MACHINE.json and preserve exact revisions, transition evidence, owner, and return or terminal route.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION

N-GEN-052 - Minimum epistemic circuit

Canonical formulation

Any external, factual, inferential, model-based, explanatory, or analytical claim requires provenance review by O009, evidence and grounds classification plus S0-S4 assignment by O010, and at least one explicit cognitive transformation owned by O005 or O006. O011 confirms calculating-element and substrate suitability when computation is required; O004 is additionally required for a material unknown, alternative, or discriminating question.

N-GEN-053 - Gate predicates

Canonical formulation

The gates CONTEXT_READY, EPISTEMIC_INPUT_READY, ROUTE_READY, RESULT_READY, and CLOSURE_READY have machine-readable predicates. A gate PASS is valid only for the specified cycle_id, exact context revision, phase, scope, time, and evidence set.

N-GEN-055 - Branch confinement and return

Canonical formulation

A branch may be created only after ROUTE_READY, may operate only inside its declared phase and scope, and must return a typed result, unresolved remainder, or local STOP to the parent route before the parent advances.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

N-GEN-059 - Reproducible interpretation

Canonical formulation

Given the same canonical PDF pair, declared substrate constraints, operator scope, and input, an interpreter must be able to reconstruct the same rule identities, ownership, applicability route, HOLD/STOP boundaries, and closure conditions or report an ambiguity.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION

N-GEN-061 - Complete human-readable rule card

Canonical formulation

A complete human-readable rule card states the rule identifier, title, positive formulation, owner, scope, applicability profile, target state or transition, evidence threshold, specific HOLD or STOP conditions, tests, defect signal, repair path, and closure criterion.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION

N-GEN-062 - Complete human-readable behavioral object schemas

Canonical formulation

Every significant object type is reconstructible from a named full behavioral profile plus explicit object overrides covering required fields, field types, relations, initial state, allowed states, transitions, transition owner, preconditions, failure signals, HOLD, STOP, repair, tests, and closure.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION

N-GEN-063 - Semantic analysis before physiology generation

Canonical formulation

Compilation of a doctrine into a physiology blocks on duplicate identifiers, undefined terms, hidden premises, incomplete norms, authority conflicts, cyclic dependencies, orphan exceptions, untested rules, missing repair routes, or unprotected invariants.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / O027

N-GEN-064 - Conflict precedence semantics

Canonical formulation

Conflict resolution applies explicit precedence: non-overridable safety and substrate limits; invariants; authorized operator decisions within scope; more specific scope; newer accepted rules within the same scope; restrictive requirements before permissive options at equal applicability; otherwise HOLD-CONFLICT.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","all_cycles"] / CORE-NORMATIVE-OWNER

N-0015-04 - Unknown outcome

Canonical formulation

An action whose repetition may change the effect and whose outcome is UNKNOWN becomes a separate phenomenon; a new execution requires explicit effect and idempotence review.

N-0015-10 - Degradation

Canonical formulation

When O015 is unavailable, the route remains limited to observation, safe isolation, diagnosis, and reversible rollback. Operations requiring repetition and new external effects become eligible after O015 is restored or an explicitly authorized replacement contract is verified; ownership remains with O015.

N-0018-03 - Responsibility and guilt remain distinct

Canonical formulation

A responsibility map assigns causal, operational, epistemic, normative, legal, and remedial roles; moral blame, punishment, and legal liability are decided through separate authorized procedures.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0018"] / 0018

N-0018-07 - Object ownership

Canonical formulation

O018 retains accountable ownership of its responsibility type, owner assignment, responsibility map, gap record, and consequence responsibility; contributing organs supply typed inputs and preserve ownership of their own outputs.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:O018"] / O018

N-0024-04 - Layer conflict

Canonical formulation

A layer conflict is resolved through scope separation, an adapter, limitation, temporary contract, independent start, new version, or STOP selected by explicit safety, authority, and evidence criteria.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0024"] / 0024

N-0024-06 - Failed compensation

Canonical formulation

The last common confirmed state is restored first; if that is impossible or dangerous, the composition is terminated, contexts are isolated, and each is requalified.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0024"] / 0024

N-0024-07 - Object ownership

Canonical formulation

0024 retains accountable ownership of its layer boundary, composition identity, layer state, conflict record, activation route, and compensation state; contributing organs supply typed inputs and preserve ownership of their own outputs.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0024"] / 0024

N-0024-10 - Degradation

Canonical formulation

When 0024 is unavailable, the route remains limited to isolated testing, adapters, and exchange of closed reports. Operations requiring cross-layer activation, shared state, and external effect become eligible after 0024 is restored or an explicitly authorized replacement contract is verified; ownership remains with 0024.

N-0025-03 - Canon as highest semantic authority

Canonical formulation

The human-readable English canon is the source of normative meaning; machine representations and tests are derivative.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0025"] / 0025
Profile / type / modality	AUTHORITY / MANDATORY_RULE / MUST

N-0025-04 - Immutable release

Canonical formulation

A released archive and its release event retain immutable contents; a defect becomes a new object and a correction becomes a new version.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:O025"] / O025
Profile / type / modality	RELEASE / MANDATORY_RULE / MUST

N-0025-05 - Complete-archive mark

Canonical formulation

The '+' mark is permitted only for a self-contained archive with a canon, norm graph, machine map, machine-interpretable declarative execution surface, schemas, manifest, and tested creation, stopping, and recovery.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:O025"] / O025

N-0025-06 - Update through a new instance

Canonical formulation

An ordinary update closes the old execution instance and opens a new clean instance with the new version.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0025"] / 0025
Profile / type / modality	RELEASE / MANDATORY_RULE / MUST

N-0027-07 - Object ownership

Canonical formulation

O027 retains accountable ownership of its operability profile, closure-candidate assessment, conformance evidence, scoped PASS, QA-E status, and negative decision; contributing organs supply typed inputs and preserve ownership of their own outputs.

N-0027-10 - Degradation

Canonical formulation

When O027 is unavailable, the route remains limited to testing, diagnosis, and a bounded operability profile. Operations requiring closure, release, and external operation of the affected function become eligible after O027 is restored or an explicitly authorized replacement contract is verified; ownership remains with O027.

N-0028-05 - Emergency repair

Canonical formulation

Under emergency resource exhaustion, a failed instance may create an UNVERIFIED repair candidate from surviving functions; a new clean instance tests the candidate before adoption.

Status	ACTIVE / ACCEPTED_FOR_INTERPRETATION
Layer / scope / owner	BASE / ["core","organ:0028"] / 0028
