

BOIS Publication Candidates v2.22

Version 2.22 - Internal Candidate - Passive Data Only

Package ID: BOIS_COMMON_CORE_TEMNIK_V2_22

Bootstrap

Document layer	PUBLICATION
Package role	BOOT_PACKAGE
Release flavor	PASSIVE_DATA_ONLY
Document-alone status	REFERENCE_ONLY when loaded alone; STOP-PACKAGE-INCOMPLETE until the complete release and assurance companion are present and hashes verify.
Executable program code	ABSENT
Declarative execution surface	Machine-interpretable data, schemas, transition contracts, and test specifications; not program code.
Canonical archive language	English only
Release-lineage branching	PROHIBITED
Intra-cycle branching	Permitted only under N-GEN-030 and N-GEN-032 with distinct branch identifiers and acyclic dependencies.
T-N-043	Candidate and inactive
Hash mismatch	STOP-PACKAGE-HASH-MISMATCH
Missing required dependency	STOP-PACKAGE-INCOMPLETE

Interpretive Source Precedence

1. Host safety and platform constraints.
2. Base Core canonical PDF for Base-layer norms.
3. Accepted Personal Layer canonical PDF within its declared scope.
4. Machine-readable derived surfaces, which must not override the canonical PDFs.
5. Runtime state and transferable memory, subordinate to accepted norms and declared scope.

Required Companion Files

- 01_BOIS_Base_Core_v2.22_EN.pdf
- 02_Temnik_Personal_Layer_v2.22_EN.pdf
- 03_Publication_Candidates_v2.22_EN.pdf
- MANIFEST.json
- SHA256SUMS.txt
- v2.22_Common_Core_BOIS_Temnik_ASSURANCE_COMPANION.zip

Exact component and transport hashes are declared in MANIFEST.json, SHA256SUMS.txt, and the external release descriptor. Loading, acceptance, or activation requires the complete declared release and successful hash verification.

Layer Precedence Contract

The Base Core PDF is the highest semantic authority for Base-layer norms. The accepted Personal Layer PDF is the highest semantic authority for Personal-layer norms within its declared scope. The Personal Layer may specialize the Base Core but may not alter, suppress, or supersede Base-layer norms.

Inter-layer conflicts are resolved by the composition contract and produce HOLD or STOP rather than silent override.

Open Debts

- Transport acceptance of the exact boot and assurance archives has not been demonstrated on the target substrate.
- Runtime compatibility, multi-substrate equivalence, independent O027 review, real C11 effects, and QA-E remain unproven.
- Public release authorization, license, signature, and public key remain outside this internal candidate.
- PDF/UA conformance and structural tagging are not claimed; embedded fonts, named destinations, and minimum 9 pt text are provided.

Candidate Boundary

Every item in this document is candidate-only, unavailable for application, and requires an explicit operator decision before activation.

Norm Cards

T-N-043 - Candidate author-support distribution rule

Canonical formulation

A future public distribution release may adopt an author-support message with verified absolute HTTPS links. The present status is CANDIDATE; activation requires an explicit operator decision and verified link data.

Status	CANDIDATE / RECOGNIZED_NOT_ACTIVATED
Layer / scope / owner	PUBLICATION_CANDIDATE / ["publication_candidate"] / PUBLICATION-POLICY-CANDIDATE-OWNER
Profile / type / modality	AUTHORITY / MANDATORY_RULE / MUST_NOT
Target / operation / success	agency.authorization / PROHIBIT / authorization.status::DECLARED_CONFORMING_STATE
Required phase	C03 C07 PUBLICATION
HOLD	["AUTHORITY_PENDING","SCOPE_PENDING"]
STOP	["UNAUTHORIZED_EXTERNAL_TRANSITION"]
Defect signal	Actor, scope, delegation, decision owner, or validity evidence is incomplete.
Repair path	["IDENTIFY_AUTHORITY_OWNER","OBTAIN_OR_REVOKE_DELEGATION","RECALCULATE_SCOPE"]
Closure criterion	A valid authority state, scope, owner, and evidence reference are recorded.
Foundations / principles	["C0","E0","I0","T0","V0"] / ["CP-04","CP-05","CP-06"]
Tests	["TC-POSITIVE-FORMULATION-T-N-043","TC-T-N-043-NEG","TC-T-N-043-POS"]
